

## Invitation to contribute to a special virtual issue of Journal of Catalysis

We feel that 30 years of International Conferences on Theoretical Aspects of Catalysis series should be commemorated by a Special Issue. Journal of Catalysis will be pleased to publish *original research articles* submitted on the occasion of 30 years of ICTAC. We are inviting contributions that - in an exemplary manner - show the power of computational techniques in solving problems in various fields of catalysis, including, but not limited to heterogenous, homogenous and enzymatic, or provide original results that highlight theoretical aspects of the research on catalysis.

Articles can be submitted from April 1st until July 31, 2016 to the editor-in-chief as usual. The cover letter should mention "contribution to the 30 years of ICTAC virtual issue". The submitted manuscripts will undergo a regular reviewing process and send to production as soon as accepted. Unfortunately, the acceptance window cannot be extended and late manuscripts can not be included. When the collection is complete an editorial will appear that puts the individual contributions in perspective, whereas every single article would include a footnote to the title saying that this contribution is part of the virtual issue "30 years of ICTAC".
